Mac OS X Internals ()

Mac OS X Internals. The Structure of an Apple-Protected Binary. A typical Mach-O file contains a header at its beginning, followed by a sequence of load commands, followed by data for one or more segments. Load commands, which can have variable size, specify how the file is laid out and how it is to be linked.

Understanding Apple's Binary Protection in Mac OS X

Besides, the TPM was a common piece of hardware in modern-day computers, and indeed, it often sat unused in computers from several vendors. In the summer of 2006, when the Mac Pro was introduced, x86-based Macs stopped having onboard TPMs altogether. Even then, conspiracy
