forms certain glands.

**Types of Tissues |  
Anatomy and  
Physiology I**

The study of the shape and arrangement of cells in tissue is called histology. All cells and tissues in the body derive from three germ layers in the embryo: the ectoderm, mesoderm, and endoderm. Different types of tissues form membranes that

with anatomical structures of the human body, including cells, tissues, organs, and organ systems. Anatomy is always linked to physiology, the study of how biological processes function in living organisms. Therefore it is not enough to be able to identify a structure, its function must also be understood.
